

Manual Certificate Installation – Android

Due to security requirements enforced by Google, the installation of the certificate will force the user to set up pin codes or passwords to unlock the device. Research has shown some workarounds are available but those are not recommended & are beyond the scope of this document.

- 1) Download the certificate from : <http://www.farmcove.school.nz/images/SSL.crt>
- 2) A prompt should pop up asking to Name the certificate – Type in “Farm Cove” & tap OK

- 3) If you have a pin code or password on your device, you will receive a notification advising the certificate is installed, if not please proceed to step 4
- 4) A warning will appear advising that a screen unlock PIN or password must be set up. Tap OK on this warning

- 5) Follow the prompts to set up a PIN or Password
- 6) Once the password requirements are met, the certificate should install automatically
